

Better technology solutions start with **better people.**

OUR SERVICES

You can see the impact of our staff by looking at Envision's impressive customer retention rate - a side effect of our company-wide dedication to customer service.

Our philosophy has made Envision Technology Advisors one of the most comprehensive business-oriented technology companies in New England. We strive to give our customers a single, turnkey point of contact for any technology issues with solutions that include:

Virtualization & Centralized Storage

Envision is one of only a few VMware Enterprise VAC (VMware Authorized Consultancy) Partners in New England and the only NetApp Gold Partner in Rhode Island. In fact, every employee of Envision holds a virtualization certification.

Envision's customers continue to be amazed by the ease of virtualizing. That's because we have built a framework for our deployments that we call the EnVirtualization Customer Experience (E.C.E.). This process guides our deployments so that every customer has a consistent, simple and precise experience. The E.C.E. is just one way that our customers experience the commitment that Envision has to quality and to this technology.

Network Consulting

Our engineers don't just look at a client's technology. They look at the business, then they see how the technology fits into that picture. Sometimes you can be so busy working for your business, you don't get to work on your business. Envision can help provide perspective.

Security Consulting

Envision's concern over client exposure has led us to develop rigorous standards and practices to protect clients from exposure. We've hired former hackers for security consultations and created ongoing arrangements with third-party testing companies to verify our work on behalf of clients.

Web Site Design

Your Web site needs to meet the goals of your business and the needs of your audience, but it also has to reflect the culture, style and overall brand that you have worked hard to establish. Envision delivers Web site designs that are attractive and engaging while always maintaining their primary focus - allowing your users access to the services and solutions that your business offers.

.NET Development

Using databases and dynamic code can improve your site's value as a tool for conducting business. Whether it's an E-commerce solution, custom widget or comprehensive Content Management Solution, we have the in-house expertise to plan and execute projects that add value to Web sites.

SharePoint Development

From development and rollout of new installations to comprehensive health checks on existing SharePoint deployments, Envision can help you get the most out of SharePoint.

Online Traffic Generation

Better qualified traffic delivers better results. Envision will help you identify your target market and goals to build the foundation for your site's traffic generation. We look at and consider all areas that can help you to increase qualified site traffic, including search engine optimization (SEO), Pay-Per-Click advertising, social networking and blogging, video and more.
