

## Tools for Managing the Virtual Environment

### Virtualizing a network is not an end, **it's a beginning.**

**W**hen you buy a car, you don't expect to execute the transaction, move your stuff from your old car to the new one and then drive off without any further obligation! You know that the car will have a seemingly endless list of demands. It will need gas, oil, tune-ups, tires, brakes and a variety of other maintenance level items throughout its life.

You also know that one way to keep costs down, and avoid unexpected breakdowns, is to monitor the health of your car and invest in regular tune-ups. A well maintained vehicle runs better, has fewer unexpected failures, and retains its value better over its life. Your virtualization environment is the same way.

A well monitored and maintained environment will give you years of headache free service. A system that is left to its own devices will ultimately fail.

So, how do you wade through all the different options that are out there for management and maintenance of your virtual environment? We say DON'T! Let Envision do that for you!

At Envision, we are virtualization experts. Our practice is focused on virtualization and all that it encompasses. Our team has spent countless hours assessing the options when it comes to management tools and has developed partnerships with some of the best names in the business, including:

#### **We have solutions for:**

- > Monitoring
- > Lifecycle Management
- > Capacity Forecasting
- > Health Assessment / Management
- > Large Scale P2V Conversions
- > Storage Assessment
- > Disaster Recovery
- > Virtualization Powershell Integration

Just to name a few!

If you have a need, let the experts at Envision help you find the right solution today! [www.envirtualization.com](http://www.envirtualization.com).
